

[silwaCAM]

Maximize the efficiency of your facility by equipping your handling vehicles with a complete, precise, and reliable RTLS (Real-Time Location System). This enables the optimization of missions, reduces time and supply chain costs, enhances safety, and minimizes accidents.

[The Software Solution]

- **COMPLETE VEHICLE LOCATION SYSTEM**

silwaCAM is a complete Real Time Location System (RTLS), which includes all the components necessary to enable the precise location of vehicles and humans within facilities, regardless of size, complexity, and technologies adopted.

- **ACCURATE REAL-TIME LOCALIZATION**

silwaCAM operates in real time with very high levels of accuracy and is easily integrable with any pre-existing logistics system. It was conceived by Stesi to give any plant an edge.

- **A SCALABLE QUALITY SYSTEM**

Excellent performance, combined with Stesi's flexibility and experience, make silwaCAM a value-for-money product, ideal for companies that want to break down inefficiencies and turn logistics into a competitive advantage.

- **TOP TECHNOLOGY, AFFORDABLE PRICE**

silwaCAM uses optical technologies that offer performance comparable to other popular solutions, but with lower costs and greater ease of implementation.

- **EASILY EXPANDABLE SYSTEM**

The RTLS system can be integrated with sensors designed to measure load weight, fork height, and the load/unload status of the forks.

- **AN ALL-IN-ONE SOLUTION**

silwaCAM is a comprehensive solution that includes hardware and software and is part of Stesi's silwaSUITE. Depending on the company's needs and equipment, a different configuration can be provided.

[What silwaCAM can do for you]

silwaCAM enables you to know the position of a moving object in real time. This enables the business to significantly lower expenses while improving the efficiency of its facility and resources.

- Knowing the location of trucks in realtime helps optimize routes and missions, reducing handling times.
- Thanks to the vehicle tracking system, loading units can be identified without reading barcodes or RFID.

- RTLS technology enables “GPS-like” guidance systems for truck drivers, automating route selection and picking/storage operations.
- Geolocation enables real-time monitoring of activities, hence productivity enhancement.
- RTLS systems allow precise mapping of the logistics environment, which can be visualized in 3D.
- Injuries can be prevented by reporting proximity between vehicles and men

[Integration]

silwaCAM is a complete product that can be integrated into any environment, regardless of the technologies and information systems in use. silwaCAM is backed by the experience and expertise of [stesil], the Italian company with over 25 years of experience in the software market for logistics and production optimization.

[Benefits]

• INCREASED PRODUCTIVITY OF VEHICLE FLEETS

RTLS helps reduce the distances covered by vehicles, optimize tasks, and increase productivity in the unit of time.

• SUPPLY CHAIN SYSTEM COST REDUCTION

Optimizing missions and reducing vehicle operational time has a positive impact on the costs of all executive activities.

• INCREASED PRODUCTIVITY OF OPERATORS

Localization, with associated route reduction, lowers time spent on each transportation mission and increases resource productivity.

• REDUCING ENVIRONMENTAL IMPACT

Refining and minimizing vehicle routes also has an important impact on environmental sustainability.

• ELIMINATION OF LOADING UNIT SCANS AND LOCATIONS

Locating vehicles and loading units avoids barcode reading operations, which leads to increased efficiency.

• INCREASED PLANT SAFETY

Knowing the location of vehicles and men enables the integration of safety and collision warning devices between vehicles and men, resulting in reduced risk of injury.
